### **Critical Alert Systems Signs Agreement With Mobile Heartbeat™**

Critical Alert Systems becomes reseller for Mobile Heartbeat smartphone technology to enhance clinical coordination and communication.

Westbrook, Maine (September 19, 2012) — Critical Alert Systems (CAS), parent company of UCOM Paging, Teletouch Paging and Intego® Software, has become an exclusive reseller for Mobile Heartbeat™. The agreement gives CAS reseller exclusivity in the paging market. The Mobile Heartbeat suite consists of three components integrated into a single, intuitive smartphone application and data server designed to deliver up-to-the minute, personalized patient information to designated smartphones.

“Mobile Heartbeat is a natural fit with our CommonPath™ nurse call and critical messaging technology, and we’re excited to share it with our existing and new healthcare customers,” said Critical Alert Systems President Ted McNaught. “Mobile Heartbeat’s ability to deliver a live feed of patient data and test results directly to a clinician’s mobile device, while maintaining HIPAA standards, is a game-changer for hospitals looking to measurably improve the quality and efficiency of care.”

In addition to pushing lab results through instant alerts, Mobile Heartbeat lets clinicians quickly find and contact other caregivers in and out of the hospital. The system allows real time telemetry and nurse call alarms, as well as pharmacy requests and doctors’ orders, to be received on a designated hand-held device.

The Mobile Heartbeat solution connects seamlessly with Hospital Information Systems, nurse call, telemetry and other third party systems through readily available interfaces. And all that’s required is a Mobile Heartbeat server, software and custom docking station for mobile devices. The system can deploy on standard iPhone, iPad and Android devices, and using existing WiFi networks, allows clinicians to make VOIP calls. More information is available at [www.mobileheartbeat.com](http://www.mobileheartbeat.com).

#### **About Critical Alert Systems**

Critical Alert Systems provides communication and workflow systems and technology that help healthcare organizations save lives and deliver faster, more efficient patient care. The company’s services include fast and reliable critical messaging for emergency medical and disaster response teams as well as software-driven patient-to-caregiver communication systems that provide measureable improvement in patient satisfaction and staff efficiency. Critical Alert Systems delivers services to more than 500 healthcare facilities nationwide through its subsidiaries Intego® Software LLC, UCOM Paging and Teletouch Paging. More information is available at [www.criticalalertsystems.com](http://www.criticalalertsystems.com).
